

'Introduction to Supply Chain' is a seminar designed for those interested in acquiring a general background of key components, concepts and approaches generally used within the Supply Chain Management. The focus of the course is on highlighting the elements that makes the Supply Chain a strategic collective effort for any organization.

The seminar will also show you how you can improve bottom line results through a better team effort among all participants of your Supply Chain.

Who should attend:

Managers responsible for the different components of the Supply Chain, in particular those representing the following areas: purchase, production, distribution, warehouse, operation planning and sales.

How your organization will benefit:

1. Develop a common understanding of your company's Supply Chain among the different departments/functions of your organisation.
2. Increase the level of commitment of your employees on the overall performance of your Supply Chain.
3. Enhance the communication between departments by developing a common Supply Chain vocabulary.
4. Create the basis for the development of a Supply Chain strategy.

Duration: 1 1/2 day

Maximun number of participants: 10

Examples and exercises will make use of software to illustrate different practical issues

Main topics

- Supply Chain strategy
- Process-based modelling of the Supply Chain
- Cost and logist performance
